BOTANICAL GARDEN AND CAMPUS DEVELOPMENT REPORT

The maintenance and development of the HRM campus is carried out under the supervision of the management committee of Khed Taluka Shikshan Prasarak Mandal and also the principal. The memorial of the founder chairman, Late Shri. Sahebraoji Buttepatil is kept well maintained and is beautified by lawn. The plants near the college entrance were given proper training and pruning and kept well in shape. A permanent podium with a flag pole is well maintained.

Shri. Sahebraoji Buttepatil Grahak Bhandar (store) for students is functioning regularly, where stationeries are provided at discounted rates. The common canteen in the campus became non-functional due to the post-covid scenario. For conducting the various activities of the college like meetings, conferences etc., Shri. Vitthalrao Buttepatil auditorium is kept well maintained. Facility for pure drinking water is also made sure at various places throughout the campus. Proper care is also taken care of all these facilities.

A Gymnasium department is shifted to other place due to construction of new building. Many equipment's are available in the gym for the use of students. Students regularly visit there and make use of the facilities. Ladies' hostel having a capacity for 120 students is also running in the campus. Many girl students who come from remote areas are getting advantage of this facility. Solar water heating facility is available in the hostel. A lady in-charge is also appointed for the smooth administration. Many sports facilities are available there for the residents. A well kept mess is run there which is looked after by the residents themselves.

Under the Botanical Garden and Campus Development Committee, a survey of plants was conducted. Unfortunately, a significant number of plants were cut down to make space for the construction of new buildings, resulting in the diminishment of the garden area. We remain committed to revitalizing the botanical garden once sufficient space becomes available. Our plan is to restore the garden with a diverse selection of rare and endangered plants.
